The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HFL inhibiting VHH fragment, HFL #22 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 129 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HPL inhibiting VHH fragment,

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #13 from llama (camelid) species

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #1 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #8 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (SNIF )

Under some circumstances it may be desirable to retain the antibody product with the plant rather than extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-GUS antibody (denoted Clonel8) heavy chain variable domain (VH) attached to peptide linkers, myc and his6 tag. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a DNA sequence encoding a heavy chain immunoglobulin, where the DNA is linked to promoters and provided with an additional sequence encoding a peptide capable of targeting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin or an active fragment or derivative, or a protein that is immunoglobulin or an active fragment or derivative, or a protein that is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modifying a plant to produce an antibody useful for increasing pathogen resistance or to modulate metabolism comprises introducing a DNA sequence encoding a heavy chain immunoglobulin linked to a peptide that targets a cellular compartment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a DNA sequence encoding a heavy chain immunoglobulin, where the DNA is liked to promoters and provided with an additional sequence encoding a peptide capable of targeting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain that is immunoglobulin or an active fragment or derivative, or a protein that is immunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistance in a plant or to modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The preferably human, against the antigen, e.g., pathogenic organisms. The preferable domain (VH) attached with endoplasmic reticulum (ER) retention variable domain (VH) attached with endoplasmic reticulum (ER) retention beta-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistance in a plant or to modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-potato SBEII antibody heavy chain variable domain (vH) attached to peptide linkers, myc and his6 tag. The potato SBEII is a starch branching enzyme also designated SBE A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a DNA sequence encoding a heavy chain immunoglobulin, where the DNA is linked to promoters and provided with an additional sequence encoding a peptide capable of targeting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modifying a plant to produce an antibody useful for increasing pathogen resistance or to modulate metabolism comprises introducing a DNA sequence encoding a heavy chain immunoglobulin linked to a peptide that targets a cellular compartment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08-DEC-2000; 2000EP-00310997.

                                                                                                                                                                                                                                                                                                                                       The present invention describes an immunoconjugate devoid of a light chain. The immunoconjugate binds to a tumour antigen that contains at least one variable domain of heavy chain antibody having an anti-tumour agent attached. Also described is the use of the immunoconjugate for the manufacture of a medicament to treat tumours expressing a tumour marker that is recognised by the immunoconjugate. The immunoconjugate has cytostatic activity and can be used as a tumour growth inhibitor. It can be used for the manufacture of a medicament to treat tumours expressing a tumour marker that is recognised by the immunoconjugate. The present sequence represents a cemel anti-carcinoembryonic antigen (CEA) antibody WH region designated chb-CEA5 and beta-lactamase immunoconjugate, from

Condition of a cell or tissue in the extract or sample to be proteins in a cell or tissue in the extract or sample to be groteins in a sample, comparing the distribution of proteins in different cell types, and identification of proteins that may be of importance in determining the altered properties of cells in disease, aging or other conditions. Using a heavy-chain variable domain derived from an cell immunoglobulin that is naturally devoid of light chains (VHH) in (I) comparitively/resolution in the order of 10-100 times, and detection of central translationally modified proteins. The invention also describes a method (II) that enables the simultaneous processing of large numbers of target antigens in a controlled way. The incorporated phage-ELISA central central complete automation of the technology, based on computer-made decisions on the values of the phage-ELISA for contitions can be tested, varying amounts of imput-phages can be used central canditions can be tested, varying amounts of input-phages can be used conditions. In (II), due to the fact that many different concluse, enabling the generation of large numbers of attitude the simultaneously in order to decrease the enrichment of sticky phage-central candies. Micro-panning is an effective tool for selecting both naive, synthetic and immune libraries on large numbers of different target time frames needed for the generation of large panels of antibodies in short time frames needed for the generation of large panels of antibodies in short cantilogy (VHH)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                   DNA sequence encoding a heavy chain immunoglobulin, where the DNA is linked to promoters and provided with an additional sequence encoding a peptide capable of targetting heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistance in a plant or to modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-potato SBEII antibody (denoted Clone68) heavy chain variable domain (VH) attached to peptide linkers, myc and his6 tag. The potato SBEII is a starch branching enzyme also designated SBE A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for modifying a produce an antibody or an active fragment or derivative, or functional equivalent, in a cellular compartment comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modifying a plant to produce an antibody useful for increasing pathogen resistance or to modulate metabolism comprises introducing a DNA sequence encoding a heavy chain immunoglobulin linked to a peptide that targets a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-DEC-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local
The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #15 from
                                                                                                                                                                                                                                                                                                   New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid

                                                                                               The present sequence represents the heavy chain variable region of an antibody isolated from llama, which was immunised with Malassezia furfur M. furfur has been implicated in dandruff formation. The heavy chain variable region is conjugated to an active agent, and used to produce a composition for topical application, e.g. to the scalp. The topical composition, e.g. hair care products such as shampoos and conditioners, skin care lotions, shower gels, etc., is useful for targeting an active agent to a site at which M. furfur is present for the treatment and prevention of dandruff.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local Similarity
                                                                                                                                                                              The present sequence represents the heavy chain variable region of an antibody isolated from llama, which was immunised with Malassezia furfur M. furfur has been implicated in dandruff formation. The heavy chain variable region is conjugated to an active agent, and used to produce a composition for topical application, e.g. to the scalp. The topical composition, e.g. hair care products such as shampoos and conditioners, skin care lotions, shower gels, etc., is useful for targeting an active agent to a site at which M. furfur is present for the treatment and prevention of dandruff.                                                                                       The present sequence is an isolated anti-Di acid heavy chain variable (HC -V) fragment, nDl. This antibody fragment is specific to antigen, Dicarboxylic linoleic acid (Di acid). Antibodies specific to target antigen can be produced by cloning the cDNA encoding the antibody fragment derived from immunoglobulins naturally devoid of light chains from non-immunised source, with sequences encoding one or more of heavy chain constant domains and expressing the product in pHEN.5 vector. This method avoids the need for the donor previously to have been immunised with the target antigen and is also preferable to hybridoma technology, or cloning from B cells and spleen cells where a new library is needed for each antigen. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                          (HIND-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Heavy chain variable fragment; HC-V; anti-Di acid; nD1; antigen; cloning; antibody fragment; dicarboxylic linoleic acid; Di acid; llama; donor; immunoglobulin; non-immunieed source; constant domain; light chain; pHEN.5 vector; immunised; hybridoma technology; B cell; spleen cell.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-09-805-290A-19

"Complete amino acid sequence of the alpha 2 heavy cha
IgA2 immunoglobulin of the A2m (2) allotype.";
Proc. Natl. Acad. Sci. U.S.A. 75:966-963(1978).
-1- MISCELLANEOUS: THE SEQUENCE OF THE ALPHA-2, A2M(2)
REGION OF THIS MYELOMA PROTEIN IS ALSO GIVEN.
-1- SIMILARITY: Contains 1 immunoglobulin-like domain.
